

**ConnectedCooking.**  
Connect your RATIONAL  
cooking system now.

1

## Create a ConnectedCooking account.

- › Register free of charge at app.  
connectedcooking.com or in the  
ConnectedCooking app.

2

## Check the software version of your cooking systems.

- › Check this on the unit display under  
Settings > Service > Installed software  
version.
- › If the software version is earlier than  
16.0.24 (iCombi Pro) or 2.6.12 (iVario  
Pro), please perform a software update  
manually first\*.

\* More information on the software update  
can be found at [rational-online.com](http://rational-online.com) under  
Customer Service/Downloads/Software.

3

## Connect the cooking system to the Internet.

- › On the unit display, start the Network  
Wizard under Settings > Network  
settings > Start network wizard > Yes.
- › Choose the desired connection.
  - ▶ **LAN**    
Make sure that a LAN cable is plugged  
in. Confirm the selection and select  
“Later” for the proxy server, unless you  
want to configure it.
  - ▶ **WLAN**    
Select the appropriate network, enter  
the corresponding password and  
confirm it.
- › DHCP is always activated by default.  
You can find more information on how  
to deactivate DHCP via the link in the  
QR code.

Scan and get details on  
networking and problem  
solving.

4

## Add cooking system to ConnectedCooking account.

- › Follow the network wizard and confirm  
the support for registering with  
ConnectedCooking with Yes.
- › **Option 1**  
On the unit display, select Log in with my  
ConnectedCooking account.  
Enter your e-mail address and password.  
Assign a device name and confirm the  
entry.
- › **Option 2**  
On the unit display, select QR code  
login. Scan either the QR code in the  
ConnectedCooking app or enter the  
9-digit activation code on your laptop.  
You can find more information about this  
in the video instructions (see QR code).

Scan and watch the video  
instructions.

5

## Enable the necessary functions on your cooking system.

- › Activate the following functions  
on the unit display under Settings >  
ConnectedCooking:
  - ▶ Automatically transfer HACCP data
  - ▶ Allow remote access (iCombi Pro only)
  - ▶ Download software updates  
automatically
  - ▶ Automatic time zone synchronization
- › Restart your cooking system to finalise.

### Service and support

You can find more information in the FAQs at [connectedcooking.com](http://connectedcooking.com)

If you have any questions, our ConnectedCooking support team will be happy to help you at [cc-support@rational-online.com](mailto:cc-support@rational-online.com).

### Tip: Invite Service Partner

Invite your RATIONAL Service Partner to your ConnectedCooking account and benefit from digital services.

Your service partner will be happy to advise and support you in networking the units.

### Good to know: LAN or WiFi

For a stable connection, we recommend connecting via LAN cable.

WiFi signals can be disrupted by the high proportion of stainless steel in the kitchen, which results in poorer signal strength. It is recommended to place the WLAN router/ access point directly in front of or above the cooking system on the ceiling, never behind the cooking system.

### Note for your IT department

Some IT security policies require extra network ports to be enabled in the firewall.

You can find more information about the network requirements in your ConnectedCooking account within Support.
